
a Main residual hybrid
44,238 parameters
Backbone classifier: 120 to 10 logits
359 features
atan inputs
Window MLP
120 features
Normalise + join
120 + 27 features
Residual MLP
147 to 128 to 10
+
Input encoding
512 amplitudes
9 grouped angles
9-qubit circuit
12 re-uploading layers
27 XYZ observables
Prior correction
10-class output
Quantum branch: 324 rotation parameters + 216 re-uploading parameters
b Fixed score fusion
55,581 reported scalars
359 features
Token-wise quantum
32,410 parameters
Window MLP
23,170 parameters
Prior-correct logits
0.5 / 0.5 mean
10-class prediction
Classical fusion control: Window MLP + Dense MLP; 0.6 / 0.4 probability mixture
